

# CORRINE DRIVE

COMPLETE STREETS STUDY

## About the Study

The Corrine Drive Complete Streets Study seeks to understand and improve transportation options on Corrine Drive between US 17/92 and Bennett Rd. Your involvement assists us in identifying challenges and opportunities for the corridor.

MetroPlan Orlando is leading the study in coordination with Orange County, City of Orlando, and City of Winter Park. The study began in January 2017 and is expected to be completed in spring 2018.

## What Are Complete Streets?

A Complete Streets approach to transportation planning considers the safety and comfort of people of all ages and abilities. We consider how all users of a road can be accommodated, not just motorists.

## Three Study Phases

**Phase 1:** We'll be listening to the community's desires and using this input to help shape the study's approach. Technical data will also be gathered on how the street is used. Findings of our technical analysis and a summary of public comments will be presented at a workshop at the end of this phase.

**Phase 2:** Transportation planners will develop different solutions and show how these could perform on Corrine Drive. The public will offer ideas and assist in refining possible design options by voting on what they like best. Design options and performance information will also be shared in pop-up meetings where participants offer feedback.

**Phase 3:** MetroPlan Orlando will present a draft Corrine Drive Corridor Plan and provide an opportunity for the public to provide input. The plan will then be presented to local governments.

## What's on your #CorrineWishList?

We will hold a **public workshop** in late Summer 2017 to discuss **Phase 1 results and next steps**. Plan to attend with your ideas and questions as we move forward.

**DETAILS TO BE ANNOUNCED SOON**

## Corrine Drive Study Timeline

Last Updated: 6-2-17

## Study Objectives

The study's objectives are to:

- Enhance connectivity and accessibility between all modes of transportation, activity centers, and neighborhoods surrounding Corrine Drive
- Create a safe and supportive environment for walking and cycling
- Close gaps in regional trail infrastructure
- Identify strategies for improved transit service
- Create a vision and plan to enhance the corridor without impacting residential neighborhoods

We'll also be studying the parking situation and considering the corridor's aesthetics.

## In Progress: Existing Conditions Analysis

We collect different types of data to examine the current situation in the corridor. This helps us clearly identify needs and problem areas. Data findings will be presented to the community at a workshop in summer 2017. Once we have a good picture of the existing conditions, it will help inform possible design solutions for the next phase of study. We will be collecting traffic count information after the opening of Bumby Avenue.

## Data Being Collected in Phase 1

- Crash Statistics
- Demographics
- Health Behaviors
- ADA Friendliness
- Asthma Statistics
- Travel Behavior
- Transit Ridership
- Parking
- Land Use Information
- Right-of-way
- Utilities
- School Plans
- Stormwater
- Lane Markings
- Traffic Counts
- Sidewalks
- Existing Bike Lanes
- Bicycle & Pedestrian Counts
- Bikeshare Travel Patterns
- Pavement Conditions
